

## Advance System Replacement Program

**DTx** understands the necessity of maximum instrument availability and can provide for this when repair is required.

### What is Advanced System Replacement?

Our **Advanced System Replacement Program** dramatically reduces repair turn-around time by providing you with a fully functional, replacement system for deployment upon notification of a requirement in the field.

### How Does it Work?

During the initial phase of our program, **DTx** will assist you in determining the number of units required. The units are stored in our US or European Service Centers or in your service locations as replacement units. When a repair to a system in the field is necessary, an Advanced Replacement unit is deployed before the non-conforming unit is received. Once **DTx** receives the returned unit, it will be repaired and stored for future use in the Advanced Replacement program.

### How Much Does it Cost?

The cost to enroll in this service is limited to the cost of the desired number of Advanced Replacement units. No additional stocking or service fees apply. Freight charges will apply.

### Benefits to You:

- Improved Turn-Around Time
- Lower Total Life-cycle Costs
- Reduced Down-Time
- Improved Customer Service
