

5000 SQ. FT. Facility Expansion Project Complete

15 October 2004, Melbourne, Florida

DTx, Inc. today announced the completion of its recent 5,000 square foot facility expansion project. The project was initiated in July 2004 and completed earlier this month resulting in a newly remodeled 20,000 square foot headquarters building in Melbourne, Florida.

DTx increased square footage by assuming ownership of adjoining office and warehouse space within the multi-company corporate center it inhabits. The addition facilitated a complete renovation of its existing facility which included knocking down and erecting walls, modifying electrical and network wiring and refurbishing existing structures.

The changes have far-reaching benefits for DTx. *"We opened up new office space to accommodate current and future staff and we were able to expand our production floor's throughput capacity not only by adding square footage but by removing architectural obstructions that prevented efficient assembly of our products,"* said Vice President of Operations, Luis Alvarez. *"We're now even better prepared to handle new customers and large and/or expedited orders."*

The completion of this most recent expansion will facilitate DTx's transition to lean manufacturing and a cell based production environment. The first phase of an ongoing initiative to improve production and overall efficiency at the facility. Phase one is expected to be completed by November. Shortly thereafter, phase two, process automation, will begin.

About DTx

DTx, Inc. is based in Melbourne, Florida and specializes in providing embedded computing solutions for medical device manufacturers. Unlike mass-produced technology like cell-phones or personal computers, medical device makers must adhere to strict regulatory requirements. DTx's unique Planned Technology Control™ Program resists the rapid changes in commercial technology that can jeopardize regulatory certifications by constantly tracking even the smallest components. DTx delivers stable, managed computing solutions whose life cycles far exceed commercial marketplace offerings. Services include custom product design and development, conformance engineering, manufacturing, supply chain management, product warranty and life cycle management.
